EMI CALCULATOR

1. Title

• Project Title: EMI Calculator
• Student Name: Akram Jayith A
• Register Number: 921724102012
• Department: CSE
• College Name: Sethu Institute of Technology
• Course: Programming in C
• Guide / Trainer Name: Pugazhmara
• Submission Date: 25.02.2026

---

2. Abstract

• The EMI Calculator project is developed using C programming language.
• It calculates EMI using loan amount, interest rate, and tenure.
• It displays monthly EMI, total payment, and total interest.

3. Introduction

• The project solves the problem of manual EMI calculation.
• It is useful for quick and accurate loan planning.
• It can be used in banks, finance sectors, and education.

4. Objectives

• Understand structured programming
• Use loops and conditions
• Work with mathematical functions
• Improve logical thinking

5. Tools & Technology

• Programming Language: C
• Compiler: GCC / CodeBlocks
• Platform: Windows

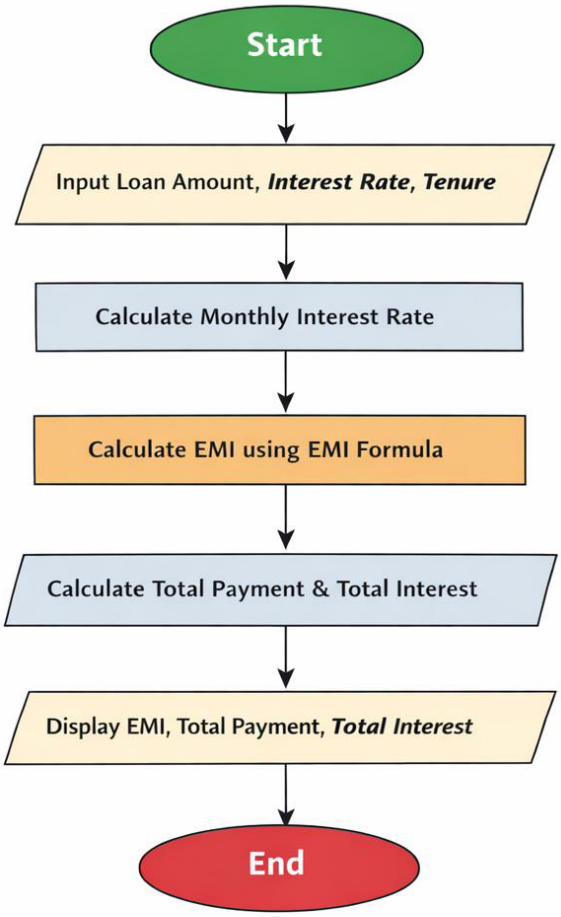
6. System Requirements

• Hardware: Basic computer with minimum 4GB RAM
• Software: C Compiler and any IDE/Text Editor

7. Methodology / Algorithm

• Start program
• Read user input (Loan, Interest, Tenure)
• Convert annual interest to monthly interest
• Apply EMI formula
• Calculate total payment and interest
• Display output
• End program

8. Flowchart



9. Program Code

• EMI Calculator C Program

10. Sample Input / Output

• Input:
Loan Amount = 100000
Interest Rate = 10%
Tenure = 12 months

• Output:
Monthly EMI = Rs 8791.59
Total Payment = Rs 105499.08
Total Interest = Rs 5499.08

11. Result

• The program executed successfully and produced the expected output.

12. Applications

• Loan planning
• Financial calculations
• Academic learning

13. Conclusion

• The project demonstrates EMI calculation using C programming concepts.

14. Future Enhancements

• Add GUI interface
• Add file handling
• Extend for different loan types

15. References

• C Programming books
• Online tutorials
• Class notes
